Year: 2025 – 26

Subject: FSDL

Name of the Student: Manasvi Patil

PRN: 124B2B027

Branch: Computer Engineering

Division: C

Assignment No 2

Title : Design a Personal Portfolio Page using HTML and CSS. Use bootstrap CDN if required.

Objectives:

- To understand the structure of a personal portfolio website
- To learn how HTML is used to create webpage layout and content
- To apply CSS for styling and visual enhancement
- To understand responsive design using Bootstrap CDN
- To design a professional static personal portfolio webpage

Outcomes:

- Create a structured personal portfolio webpage
- Use HTML elements such as headings, images, links, lists, and sections
- Apply CSS to enhance layout, colors, fonts, and spacing
- Implement responsive design using Bootstrap (if required)
- Present personal and professional information clearly and effectively

Theory:

A personal portfolio website is a static web page that represents an individual's personal, academic, and professional details. It is commonly used by students and professionals to showcase their skills, projects, education, and contact information.

HTML (HyperText Markup Language) is used to define the structure and content of the portfolio, such as headings, paragraphs, images, and links.

CSS (Cascading Style Sheets) is used to style the webpage, including layout, colors, fonts, and alignment, making the portfolio visually appealing.

Bootstrap is a popular front-end framework that provides predefined CSS classes and responsive components. Using Bootstrap CDN helps in making the portfolio mobile-friendly and responsive without writing extensive CSS.

A typical personal portfolio page includes:

- Header section with name and profile image
- About Me section
- Skills section
- Projects or achievements section
- Contact details section

Conclusion :

In this project, a personal portfolio webpage was designed using HTML and CSS with the help of Bootstrap CDN. HTML was used to create the structure of the webpage, while CSS was applied to improve the layout, colors, fonts, and overall appearance. Bootstrap was used to make the portfolio responsive and compatible with different screen sizes.

This project helped in understanding the basics of web design and front-end development. It also demonstrated how a personal portfolio can be effectively used to present personal, academic, and professional information in a clear and professional manner.
